Treatment Plant Related Services

SIGMA Corporation provides industry leading solutions for water and sewer treatment plant customers through a dedicated, and fully staffed Treatment Plant Products Division. The Plant Division at SIGMA is responsible for pre-bid project tracking, timely generation of project based quotations, specification assistance, and many other value added services for our plant-related customer base.

The SIGMA Plant Division provides many specialized solutions to meet the demands of treatment plant construction by inventorying a well-rounded quantity of large diameter fittings in flanged and mechanical joint end configurations.

We can also provide your needs for special requirements of coatings and linings. SIGMA provides a full line of protective coatings and linings on an array of products, such as fittings, restraints, and bolting. We offer a complete selection of fittings lined with Protecto 401® Ceramic Epoxy, as well as AWWA C116 Fusion Bonded Epoxy, several Tnemec brand exterior coatings, and bare or unlined fittings in addition to the standard double cement lined fitting. We offer several options for bolting, including the Teflon® coated blue bolt, stainless steel, and standard alloy bolts.
