

Valve Box Plug

PRODUCT SPECIFICATIONS

The Valve Box Plug fits a standard valve box and is effective in keeping dirt, rocks and debris from collecting in the bottom of the valve box. The high visibility handle allows for easy removal. The Valve Box Plug is made from closed cell foam that will not absorb water and is cut with a slight taper for easier installation but not compromising a snug fit that will keep the plug at the desired height in the valve box. The Valve Box Plug can also be ordered to fit any other valve stem riser pipe options.
