

VALVE BOX RISER WITH SET SCREWS

- Meets Colorado’s High Spec Class 35B Standard -

SIGMA has introduced a new Valve Box Riser with Set Screws to its Municipal Construction Castings (MCC) product line. The new Class 35B Grey Iron Valve Box Riser comes with set screws in place and ready to install in seconds. The inclusion of the set screws ensures that the riser can easily be dropped in place and tightly secured when an existing valve box riser needs to be replaced. This feature is particularly useful when resurfacing roads, sidewalks or other surfaces and a change in elevation is required.

The Valve Box Riser with Set Screws is made to accept the standard 5-1/4" valve box lids and a wide range of heights from 1" to 6". SIGMA Item numbers are as follows:

VB2601SS-35	1" VB RISER LESS LID CL-35 W/SET SCREWS
VB26015SS-35	1-1/2" VB RISER LESS LID CL-35 W/SET SCREWS
VB2602SS-35	2" VB RISER LESS LID CL-35 W/SET SCREWS
VB2603SS-35	3" VB RISER LESS LID CL-35 W/SET SCREWS
VB2604SS-35	4" VB RISER LESS LID CL-35 W/SET SCREWS
VB2606SS-35	6" VB RISER LESS LID CL-35 W/SET SCREWS

According to Charlie Kyle, SIGMA’s Midwest Regional Manager who devised the product: “Most drop-in risers are not secured in place, they simply drop in the valve box top and rest in place. This product’s set screws allow it to be locked in place, which means it won’t rattle around or worse still, bounce out. We know this product is already of interest to our customers in Colorado and are sure it will also be found useful in other areas once it is introduced to those markets. Further, as it is made of Class 35B Grey Iron, it should meet or exceed most specifications coast to coast”.

For further information including pricing for the New Riser with Set Screws, please contact your local SIGMA sales representative.
